

1 **ABSTRACT**

2 User interfaces for facilitating performance analysis for processing include
3 a first window and a second window. The first window identifies events that have
4 been captured during processing of a set of commands by a processing unit, such
5 as during the drawing of a video frame by a graphics processing unit. The second
6 window includes information regarding the processing of the set of commands at
7 different chronological points during processing, such as showing how the frame
8 appears at different chronological points while being drawn.
